

Data Reliability and Cleaning Impact

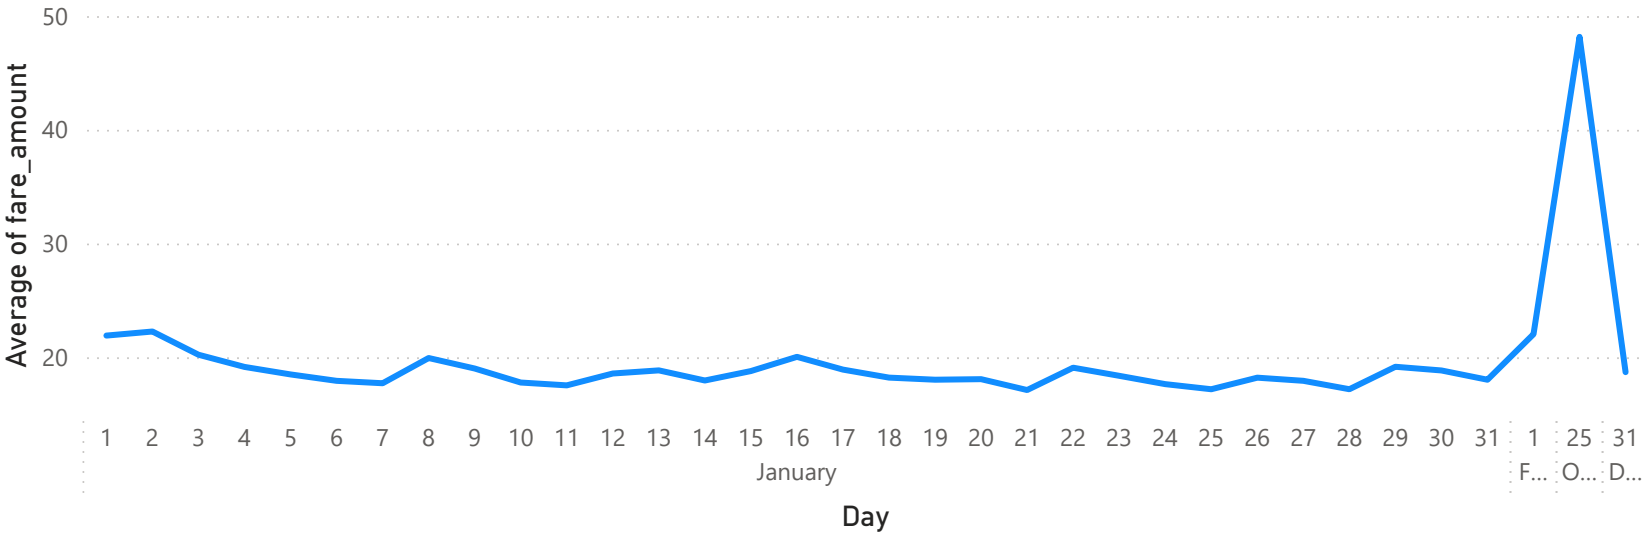

2.934181M

Count of fare_amount

Observed System Behavior

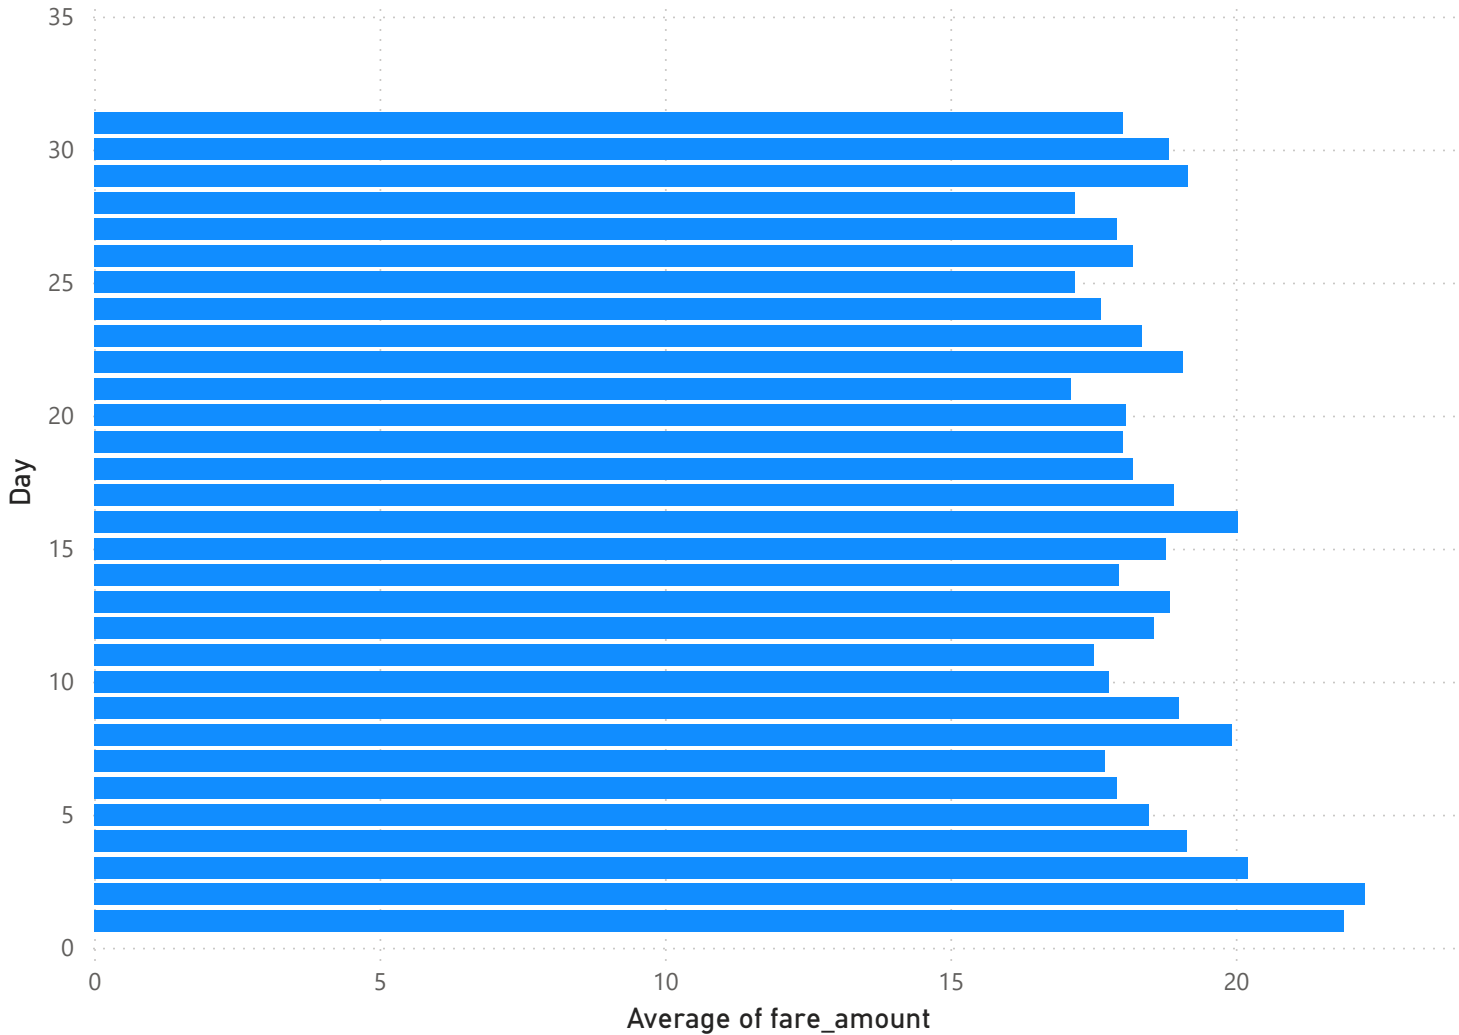

Average of fare_amount by Month and Day

18.51

Average of fare_amount

Average of fare_amount by Day

The system shows relatively stable fare patterns across days with minor fluctuations. No extreme spikes are observed, indicating overall stability with small variations that may represent localized demand changes.

Impact of Fare Change Simulation

18.51

Original Average Fare

18.51

Simulated Fare (+10%)

A 10% increase in fare would proportionally increase the average fare.
The system appears stable as it absorbs small changes without extreme variation.
However, larger changes may influence passenger behavior and demand.
